1		In the Vivi app, select the **settings icon** in the top right corner
2		You will see an option called "**Streaming Method**". If this says "AirPlay", change it to **Native**
3		You will now see more options available. If the framerate appears low, you can increase it here. Lowering the quality will increase your streaming performance.
4		Next time you attempt to stream to a display, you will be prompted for microphone access. It is very important that you press "**OK**" *If you do not see this prompt, or audio does not work when streaming, please contact the IT department*
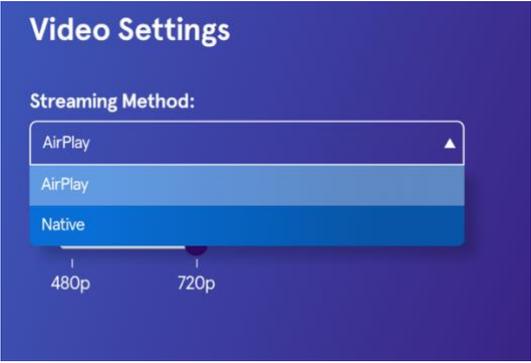

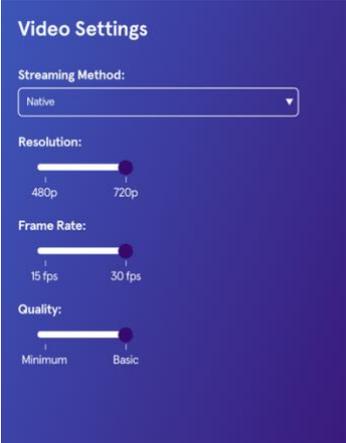

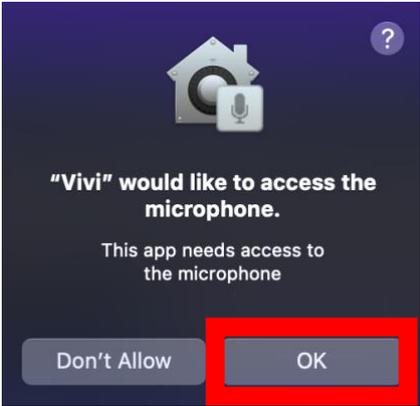

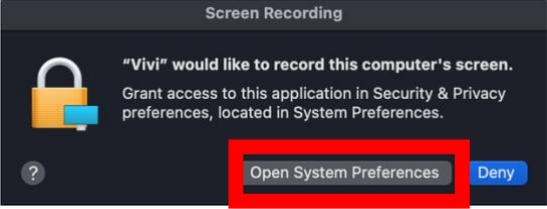

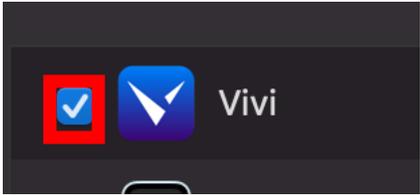

5		You may also receive a prompt for recording the computer's screen. If you do select "**Open System Preferences**"
6		Select the **gold padlock** in the bottom right corner, and enter your **MacBook Password**
7		Ensure the tick box next to Vivi is **Checked**
